

PMTV-1770_KUMoto

The BikeAway is ideally suited for broadband INTERNET access (voice, fax, data, video) and Fast News Gathering. No traffic jam with the BikeAway! This new concept of satellite uplink vehicle is based on an Eversat LightAway suitcase integrated on a Piaggio MP3 scooter.

Powerful: Communications up to 30 Mbps.

Compact and integrated: Complete satcom solution based on a motorbike. The vehicle integrates a LightAway satellite suitcase, a base band package (modem or video encoder) and a battery pack.

Easy to use and quick to air: 1 min to set up the LightAway terminal, 4 min to automatically acquire the satellite. The scooter can be ridden by car licensed holders.

Flexible: The LightAway terminal integrated on the scooter can be uninstalled in less than 2 minutes to be used as a satellite suitcase (ideal for transport by helicopter, airplane, train or ship).

Low power consumption: Up to 3 hours of communications with the integrated battery pack.

Low cost satellite uplink vehicle

Ultra mobile satcom solution

One-Man transport and operation

2 ways high data rates communications

First to establish a broadband link from the field
